

Coca Cola
the Deadly
Poison

Coca Cola Kills Children

- but only after making them suffer for years

What's wrong with Coca Cola?

Coca Cola is one of the world's most powerful and profitable corporations. In 2004, the company 'earned' over \$4bn in profits; Yet, despite repeated requests, it has not found the time or resources to insure the most basic safety of the: workers who bottle its products or the children who harvest the sugar. They don't even admit their part in the massive environmental devastation in the communities where it does business.

Effect of Coca Cola on your body

In The First 10 minutes:

10 teaspoons of sugar hit your system.

(100% of your recommended daily intake.)

*You don't immediately vomit from the overwhelming
sweetness because phosphoric acid cuts the flavor
allowing you to keep it down.*

20 minutes:

First effect of coca cola on your body. Your blood sugar spikes, causing an insulin burst. Your liver responds to this by turning any sugar it can get its hands on into fat.

(Theres plenty of that at this particular moment)

40 minutes:

Caffeine absorption is complete.

Your pupils dilate, your blood pressure rises, as a response your liver dumps more sugar into your bloodstream.

The adenosine receptors in your brain are now blocked preventing drowsiness.

Your body ups your dopamine production stimulating the pleasure centers of your brain.

60 minutes:

As the rave inside of you dies down you'll start to have a sugar crash. You may become irritable and/or sluggish. You've also now, literally, urinated away all the water that was in the Coke. But not before infusing it with valuable nutrients your body could have used for things like even having the ability to hydrate your system or build strong bones and teeth.

The phosphoric acid binds calcium, magnesium and zinc in your lower intestine, providing a further boost in metabolism.

This is compounded by high doses of sugar and artificial sweeteners also increasing the urinary excretion of calcium.

The effect of coca cola caffeine diuretic properties come into play. (It makes you have to pee.) It is now assured that you'll evacuate the bonded calcium, magnesium and zinc that was headed to your bones as well as sodium, electrolyte, and water

The effect of Coca Cola After the rush

This will all be followed by a caffeine crash in the next few hours. But, hey, have another Coke, it'll make you feel better.

This is not a nice message on what happens to your body as the can of coke goes through it but it is the fact that ...

Coca Cola is the Deadly

***Dante Alighieri ,
São Paulo, Brazil***

In 2006 April

**a 10 years old boy in the
school**

collapsed and died.

The cause of his death was:

His stomach exploded

24/10/2006

24/10/2006

*The Doctors came to
the conclusion that the*

consumed

Coca Cola

and the

Mentos Candy

combination caused his

death. The products

combined ingredients
